I'm a frontend engineer with a strong foundation in TypeScript, React, and modern build tools, comfortable designing clean architectures and shipping features quickly without sacrificing clarity or maintainability. I enjoy working in early-stage environments where ideas evolve fast, and I'm used to iterating closely with founders, shaping both product direction and user experience.

My background in technical writing and localization makes me precise in communication, good at turning complex decisions into clear reasoning, and attentive to usability and coherence. I take pride in thoughtful, reliable engineering and in building products that solve real problems for real people.

My Toolbox

Programming Languages	Frameworks & Libraries	Databases, AI & Backend Tools	Design, Scrum & Testing Tools
JavaScript	React & React Native	MongoDB	Figma
TypeScript	React Router	Node.js	Tailwind
HTML5 & CSS3	WordPress	REST APIs	Jira
C#	Vue.js	Kiro.dev	Jest
	18Next		

Relevant Experience

Fullstack Engineer — Sept 2025 - Present
FouzEf — Copenhagen, Denmark

Pair-coding and solo-coding projects for several clients and platforms:

- **Bilingual website** for a Danish NGO. Tech stack: Next.js + TypeScript stack with i18n, CSS Modules, SendGrid integration, and Vercel deployment. Planned to implement: Sanity CMS.
- **React Native application**: Hangman game, built from scratch in React Native and TypeScript, previously designed on Figma. Planned to be released to Android store this year.

Frontend Developer — Aug-Sept 2025
LifeBonder — Copenhagen, Denmark based (Remote)

- Redesigned and implemented the company's home page using JavaScript, HTML5, and CSS3, following Figma designs and ensuring brand consistency.
- Introduced a swipe carousel on Games page, integrating with a Unity design, with downloadable "personality cards," increasing engagement time by 25% and boosting content shares by 15%.
- Collaborated on building an Applicant Tracking System (ATS) with Node.js and MongoDB, projected to reduce manual candidate screening time by 40% and lower hiring costs by 20% through automated workflows.

Fullstack Engineer — March-May 2025
NordInsight — Copenhagen-based (Remote)

Built a full-stack notification system for a medical platform using React (TypeScript), Express, MongoDB.

- Developed and deployed a full-stack notification system for a medical platform using React (TypeScript), Express, and MongoDB.
- Implemented user-specific notifications, role-based visibility, and dynamic UI updates with Context API, REST APIs, and TailwindCSS.
- The feature reduced missed critical implant updates by 30%, enabled role-specific compliance workflows, and improved user experience and operational safety by 15%.

Frontend Developer — May 2023 - Sept 2023
COBOD International — Copenhagen, Denmark (Hybrid)

- Managed and enhanced a WordPress-based website, ensuring optimal functionality and user experience.
- Customized and updated site features; troubleshot and repaired base code issues using PHP, HTML, CSS, JavaScript, and MySQL.

HF Uganda 41, Kastrup 2770

- Optimized performance by implementing VCL (Varnish Configuration Language) in the CDN, improving load speed by 40% and enabling large file uploads with a 25% increase in successful uploads.
- Developed a new website from scratch based on Figma wireframes, translating designs into a responsive and cross-browser compatible WordPress site with Elementor.
- Reduced bounce rate by 18% and increased average session duration by 22%.
- Integrated third-party plugins and APIs, conducted testing/debugging, and maintained documentation to ensure long-term stability.

Code Coach & Technical Writer

Aug 2021 - March 2022

Technigo.io

Copenhagen-based (Remote)

- Guided bootcamp students via online sessions and Stack Overflow support.
- Reviewed and corrected workshop code to ensure clarity and functionality.
- Mentored students on web development standards, HTML, CSS, and API integration.
- Wrote clear, engaging tech articles for Technigo's newsletters and blog.
- Covered topics related to APIs, OOP, markup languages, and developer tools.
- Applied principles of technical documentation and writing best practices.

Studies

Fullstack Open

March 2025 - Current

University of Helsinki (Remote)

The main focus is on building single page applications with ReactJS that use REST APIs built with Node.js. The course also contains a section on GraphQL, a modern alternative to REST APIs. The course covers testing, configuration and environment management, the use of databases for storing the application's data amongst other things.

Frontend Development bootcamp

March 2025 - Current

Technigo.io, Sweden (Remote)

A 24-week fast-paced remote Boot Camp, focusing on JavaScript (ES6), React, HTML5, CSS and server-side programming with Node.js, with weekly projects covering everything from the basics of programming to structuring web projects using the latest technology. We worked with Agile methodology through weekly sprints planning, check-ins, demos and reflections. Mob-programming and pair-programming made up a significant part of the course.

Master Degree in Creative and Technical Translation

Sept 2012 - March-2014

Universidad de Valencia, España

Bachelor in Literature & Linguistics

March 2004.- Nov 2009

Universidad del Salvador, Argentina

Soft Skills

(or more like stuff AI is not good at yet)

- **Strategic Storytelling**: I write fiction as a hobby and took courses on storytelling in the workplace. This has helped me in exposing ideas and making presentations more appealing.
- **Pivotal Empathy**: Good at adjusting my focus to see the user's perspective.
- **Radical Accountability + Adaptive Ownership**: "this is not my job" doesn't live here. I get hands on every task where I'm needed at and own every feature I participate in building/debugging
- **Humble Intelligence**: 100% teachable. Love learning and will never stop. never afraid to ask for help.
- **A good sense of humor**: I like to add a bit of of a laugh into complexity, if possible.
